

## SENIOR COMPOSITE DESIGN ENGINEER

The company is looking for a Senior Composite Design Engineer.

### **The candidate will be responsible for the following activities:**

- The designer will be an important part of the design team of structural and non-structural composite components such as frames, bodies, energy absorption structures, etc ...
- The resource will deal with the study and engineering of these components by interfacing with the calculations office and the aerodynamic study as well as with the track engineers and the production department for a detailed analysis of the production process.
- The work will also extend to the automotive sector and to the study of the industrialization of some specific components.

### **Requirements:**

- Master's degree and excellent knowledge of 3D design and composite materials.
- Experience of at least 3-5 years in design activities with Catia V5 or NX (composites, solids, surfaces) gained in medium / high complexity contexts, eg. week Automotive, Aeronautics, Motorsport
- Teamcenter PDM knowledge is welcome but not required.
- Seriousness, teamwork aptitude, availability, motivation, reliability, autonomy, flexibility and good interpersonal skills are a fundamental part of the required profile.
